

Advanced Meal Systems from Aladdin Temp-Rite® is the industry's most comprehensive cook/chill system.

Temp-Rite® II sets an industry standard for cook/chill rethermalization. The system's design offers flexibility and simplicity of operation while optimizing food quality.

With Cook-Chill technology, foods are prepared in advance and rapidly chilled. Meals are assembled cold on trays, and placed in Rethermalization carts. Carts are then held in an individual roll-in or a centralized walk-in refrigerator. The food items that are to be served hot have been placed on flat plates resting on heating elements. When the thirty-six minute rethermalization process begins, these hot items are brought back up to the proper serving temperature, while insulated domes retain the heat and keep the nearby cold foods perfectly chilled.

### RETHEMALIZATION CART:

- Three cart sizes are available; 16, 20, or 24 shelf capacity
- Designed for use in centralized or decentralized applications
- Designed for easy sanitation
- Lightweight and highly maneuverable
- Thermostatically controlled conduction heating elements on each shelf of the cart
- NSF, UL, CSA listed
